

TILE ADHESIVE	Area		Tile Type & Size	Substrate
	indoor	outdoor		
 <b>ORIGINAL</b>  <b>LOW-DUST</b>	✓	✓	<b>Small &amp; Medium</b> (60 x 60cm & smaller) <b>Mosaic</b> - porcelain - stoneware <b>Earthenware</b> - clay - ceramic	<b>Concrete Surface</b>
 <b>HEAVY-DUTY</b>	✓	✓	<b>All tiles &amp; sizes</b> <b>Mosaic</b> - glass - porcelain - stoneware <b>Earthenware</b> - clay - ceramic <b>Low Porosity</b> - porcelain - homogeneous - synthetic stone	<b>Concrete Surface</b>
 <b>ORIGINAL</b> +  <b>REDIFIX</b>	✓	✓	<b>All tiles &amp; sizes</b> <b>Mosaic</b> - glass - porcelain - stoneware <b>Earthenware</b> - clay & ceramic <b>Low Porosity</b> - porcelain - homogeneous - synthetic stone	<b>Non-Concrete Surface</b> Tiling over: - existing tiles - wood - gypsum board - fiber cement board - metal - marble - granolithic flooring - glass

### 💡 Baumax Pro Tips

- 1 For tile adhesive application thickness greater than 6mm (e.g. large format tiles & medium to thick bed), use the double spreading method (on the substrate and the back of the tile).
- 2 If the back of a tile is too smooth, apply a scratch coat to roughen the surface for easier wall installations.
- 3 Always comb mortar in a straight manner to allow air release ensuring 100% mortar coverage.

### COVERAGE of 25kg Tile Adhesive

Tile Size	Adhesive Thickness (minimum)	Coverage (approx.)
mosaic and smaller than 30 x 30cm	3mm	5m <sup>2</sup>
60 x 60cm & smaller	6mm	2.6m <sup>2</sup>
larger than 60 x 60cm	10mm	1.6m <sup>2</sup>

**NOTE:** Coverage is dependent on tile size, surface smoothness of the back of the tile, substrate condition and adhesive application thickness. The bigger the tile, the smaller the coverage area.

### Redifix Slurry

4L **REDIFIX** + 4L water + 12kg **TILE ADHESIVE ORIGINAL** Coverage\* (approx) 8 - 9m<sup>2</sup>

### Redifix Modified Tile Adhesive

4L **REDIFIX** + 4L water + 25kg **TILE ADHESIVE ORIGINAL** Adhesive thickness: 3mm (5m<sup>2</sup>), 6mm (2.6m<sup>2</sup>), 10mm (1.6m<sup>2</sup>)

\*Note: Adhesive coverage is dependent on tile size, surface smoothness of the back of the tile, substrate condition and application thickness. The bigger the tile, the smaller the coverage area.
