

# Tile Adhesive QUICK GUIDE

## Original

- indoor & outdoor
- small & medium tiles

High Tensile Strength

**STRONG**

Colors: Gray & White

## Low-Dust

- indoor tile installations (hospital, condominium, renovation)
- small & medium tiles

High Tensile Strength

**STRONG**

Color: Gray

## Heavy-Duty

- indoor & outdoor
- large format tiles
- pool/water feature
- heavy foot traffic areas

Higher Tensile Strength

**EXTRA STRONG**

Colors: Gray & White

## Original + Redifix

- indoor & outdoor
- non-concrete tile installations

Increased Shear Strength

**MORE FLEXIBLE**

## Baumax Pro Tips

① For tile adhesive application thickness greater than 6mm (large format tiles and heavy-duty tiling), use the double spreading method. Apply tile adhesive on the substrate, as well as at the back of each tile.

**Note:** If the back of a tile is smooth, apply a Redifix slurry to roughen the surface prior to tile adhesive application.

② Always comb mortar in a straight manner to allow air release and to ensure 100% mortar coverage.

① Double spreading method

② Straight combing application
